PROJECTS

Title: A School Management System Technology: SpringBoot (Java) Summary:

A simple school management system where users can register, learn and create courses. Tested edge cases following the Test Driven Development Approach using Junit 5 and also performed mock tests with Mockito. Successfully connected the application to a MySQL database. Tested APIs using Postman.

A MultiUser Blog REST API with Spring Boot:

Users can create account, login, add articles to blog, comment on blog articles and a whole lot of other functionalities.

A mini Money management System with Django:

A model of a banking application, allows users to create account, perform deposit, withdrawals, transfer and so on.
